Post-Operative Bandage Rechecks/Changes.....	\$50-100
E-collar.....	\$12
TOTAL	\$207-1,484*

A \$100 deposit is required at time of scheduling

Special Instructions/Comments:

Some animals will need an Elizabethan collar to keep them from chewing or licking at the surgical site. If the E-collar is not working and your pet is still chewing at the incision area you will need to keep the area covered- often times an old t-shirt tied at the waist will work, or a wrap may need to be applied by a veterinarian. There is also a Bitter Apple spray available for purchase in our clinic and may be sprayed on a soft cloth or cotton pad and applied on the skin/fur surrounding the incision, not on the incision itself.

Some patients may receive a pressure wrap to minimize swelling or discharge depending on the size or location of the mass. These bandages will need to stay on for 2-3 days and may require a recheck by a veterinarian at the time of bandage removal. A suture/staple removal will be needed 10-14 days following the surgery and this must be set up as an appointment with our receptionists. *If applicable, you will be charged at time of pick-up for follow-up bandage changes and recheck appointments. If the animal needs sedation, there may be additional charges assessed at the time of the recheck.*

The biopsy results will be available 7-10 days after its submission. You will receive a call from either a veterinary technician or veterinarian regarding the prognosis and any additional information provided in the lab report.

***All quotes are subject to change during surgeries if unforeseen complications arise.**
